The Los Angeles business district is in chaos. Bars and restaurants are closed, and even the city itself looks abandoned. While the city is closed, two assassins have come to wreak havoc on the residents. One of them is armed with a rifle, while the other uses a scythe. If you manage to survive a few seconds after each tries to kill you, your job is to shoot them with the pistols strapped to your leg. As the simple-looking game starts, you wake up and find yourself standing on a rooftop with no memory of how you got there. The only thing you know is that you have a shotgun and a pistol in your hands. When the shooting begins, it'll be up to you to survive, explore the city, collect enough ammo, and hopefully figure out what's going on and who your friends are. If you don't like shooting people, you can also find items and keys that will help you solve puzzles in the game, and race against the clock to beat the game. Survival: The game's story is minimal, but the game's characters and locations will remind you of the famous c9d1549cdd

July 22, 2014 | Version: 1.0.2 | Platform: Windows X86 Version 1.0.2 This release is fairly minor. You can read more about the update HERE. Visually, it looks like an awesome game. The design is well thought out and very immersive. The world is fleshed out with various points of interest, activities and distractions. I bought this game last year for my collection. The previous "World of Subways" instalments weren't really my style, they usually aimed to be a bit too realistic. It always felt like a "train" simulator, but I love train sims. I prefer something a bit more fun and simple, something like "Train Simulator". This game, "World of Subways 4 – New York Line 7", is just that. It's a straight up train simulator, with a sense of playfulness. In my opinion, it feels a bit like Elite Train Simulator, with even more emphasis on world exploration. To bring the game back to the topic of this review, this is a game I'd play again and again so I could pretend like I'm in the 70's in New York or just experience the intricate details of trains. I love the fact that the game didn't pull any punches. As mentioned, this is a straight up train simulator, and it does away with any kind of pretend fun. You start off in the middle of nowhere. You have no information about the game or how to proceed. What you do, though, is explore the world. You're not given any instructions or building blocks. You have to discover where the trains are, where you're going to get on, where you're going to get off, what depot the next train goes to, how long the ride will be etc. You can only discover these things by interacting with the world, discovering where the trains are, finding the work, buildings, signposts and ticket shops. You have no specific knowledge of how the game is supposed to be played, and you have to discover this by yourself. While this is all very well, and this is a good way to "wow" your friends who might be more into the mechanics of the game, it's also a steep learning curve. While the world is fully explorable, there is little information about the world or the game available at any one time. You have no choice but to explore. Which isn't a bad thing, but it can
