Some tutorials even teach you _how_ to draw a figure in Photoshop! Photoshop is available on almost every type of computer, but it is most likely to be found in offices and businesses. To access Photoshop from within the OS X Finder, choose Go from the File menu, choose Applications, and then choose Photoshop. Figure 14-1 shows the Photoshop workspace window. **Figure 14-1:** The Photoshop workspace. Photo by Daniel Murphy. Mastering the Photoshop Interface Before getting into the menus and tools, you should get familiar with the interface, which includes the following pages: Photoshop workspace: The workspace is shown in Figure 14-1. It includes the Photoshop window and all its tools and palettes. You also access the preferences window and the Photoshop options dialog by double-clicking the Options button in the upper-right corner of the Photoshop window. Layers palette: This palette is used to manage layers, or objects that can contain other objects, or both. Each object has a layer, which is an indented strip on the Layers palette (see Figure 14-2). Image menu: This menu enables you to access several options related to image editing. The Image menu, which is shown in Figure 14-3, offers options to adjust the brightness, contrast, and color balance of the image. If your image is a bitmap (created by a scanner or digital camera), the Image menu enables you to rotate or resize it. You can also perform most of the other basic adjustments to the image here. Information window: This window shows information about an image, such as file format and resolution, as well as other useful information, like the overall size of the file. Windows: This palette is used to manage the image windows. You can open an image window, adjust the image window, and access a selection window by using the Windows palette. Options button: The Options button enables you to view the Photoshop Options dialog box and access the Photoshop dialog box, which is shown in Figure 14-4. The Photoshop Options dialog box includes the following options, which you can access by clicking the Photoshop Options button: **General** Used for general options for the program. You can adjust the image type, change the color and bit-depth of the image, and set the display preferences. The Image Type options include the following options: **RGB** An RGB (red

And now let's check out the best Photoshop alternatives to Photoshop. This list contains both paid and free Photoshop alternatives. Google Chrome Canvas Google Chrome Canvas is a digital canvas web app created by Google that offers a superior experience in editing images. It is a web-based application similar to Paint and Quill and supports most of the features available in traditional paint programs. It is an image editor for designers, photographers, illustrators, and anyone who needs to create images online and easily. Google Chrome Canvas supports almost all the features available in traditional paint programs, giving you direct access to non-destructive editing tools. It supports layers, selection, filters, backgrounds, adjustment layers, and content-aware tools. In the design phase of a project, it is a powerful tool for creating quick mockups, especially for working in small screen sizes, where the traditional Photoshop browser window is too large. And it is also perfect for rapid prototyping and web design. One of its major advantages is its simplicity. It is designed to be the first web-based tool that a designer can learn. Why Photoshop Alternatives? Google Chrome Canvas is a web-based application for your computer, so you don't need to have Photoshop on your computer to use this software. You can edit images online using a powerful, fully functional and free tool. Google Chrome Canvas is available in the Google Chrome browser via its Canary channel. You can install it by visiting the Google Chrome Web Store or visit the link below. It is free and open source so you can use all the features with no cost. Microsoft Paint Microsoft Paint is an iconic program that should probably be removed from your computer and placed in a museum. And if you haven't used it in a while, you are in for a surprise. This Microsoft program dates back to the early 1980s, and it is still an integral part of Microsoft Office. It is a simple program, but a beautiful one. If you want a simple and effective and free software for editing images online, Microsoft Paint is an ideal option. It is definitely one of the oldest photo-editing software, but it still has a lot of appeal. Microsoft Paint is free and available on Windows, macOS, and Linux computers. Q: PHP session not working in php5 after upgrade I have PHP 5.2.14 installed and used the following code to open a session, session_start(); \$_SESSION['count'] = 1; This would give the error PHP Warning: session_start(): Cannot send session cache limiter - headers already sent But after I upgraded to PHP 5.4.14 i can no longer open a session. The browser instead just displays the following Warning: session_start(): Cannot send session cache limiter - headers already sent in... So it seems that whatever code is sent after the opening curly brackets is not getting sent. Is this a PHP bug or am I doing something wrong? A: You can use PHP header() function to send the headers only at the start of script using header('Content-type: application/json'); or header('Content-type: application/x-www-form-urlencoded'); according to your environment If you have any content on this site, there is a good chance that you have made some or all of it yourself. Q: Have UpdatePanel on one of a few pages update a div on the other pages I have a Content Place Holder with a div. I have a page that loads inside of that div. When the user clicks a button on that page I want to update the div. I want to use an asp:updatePanel. I can update a div on the same page (the button's page) like this: protected void Button1_Click(object sender, EventArgs e) { Label1.Text = "done"; } I can even use the same code to update a div on the same page. But when I go to another page in the Content Place Holder and try to update the div on that page it doesn't work. I'm not sure what's going on. I'm using JQuery. Here's a snippet of the code: I have other update panels that work just fine. I suspect it's something with how I need to update the div. Here's a snippet of what I think I need to do: protected void Button1_Click(object sender, EventArgs e) { Label1.Text = "done"; UpdatePanel1.Update(); } A: As far as I know, you can't push a panel update with AsyncPostBack. You can either use the UpdateMode="Conditional" or attach the handler to the click event of the button. My recommendation is to
