The Import feature, which enables you to import and work with both drawings and digital media, supports not only markups but also file types. Now you can import files and styles that you create in a variety of other software, including Solidworks, PLM 360, and NX. You can also import file types that represent two-dimensional (2D) data like bitmap, image, and vector graphics, and three-dimensional (3D) data such as 3D models and animations. New the Magnify tool: A new magnify tool provides you with a zoomed view of the active display area. You can move the display area around by clicking and dragging, and enlarge the display with a simple drag. You can choose from three different levels of magnification for both the active display area and the drawing area, and you can switch between these levels using the up and down arrow keys on your keyboard. You can also move the active display area and the drawing area separately. The Magnify tool supports split screen mode, so you can use both a magnified drawing area and a standard display area at the same time. The new Magnify tool allows you to create custom display rules for the drawing area and to set the display area's size and the active display area's magnification level. Simplified Shared View: The new Simplified Shared View (SSV) feature has been significantly redesigned to reduce menu clutter and to provide faster and easier access to the user interface features and tools. The SSV window now offers a task pane with active tools, options, and other settings. These features are located right at the top of the window so you can see and use them quickly. As you use the task pane and the current view, its contents are immediately updated. If you click an option that doesn't apply to the current view, it's deselected. The new SSV window also has a new default view setting: Side-by-Side View. By default, it displays two overlapping views—a large display area and a small display area. To display a small display area with a single view, select the Single View option from the right-click context menu. With the new SSV window, you can easily switch between the large display area and the small display area or between different views.
