The History of Photoshop Photoshop began in 1987 as a student project at the California Institute of the Arts (CalArts). Its creator is known as Photoshop’s creator, but its mastermind and primary developer is called the Swiss Knight of Software. The software was first released with the name PhotoShop and it was initially an 8-bit image editor. Photoshop continued to evolve and was adopted in 1993 as the first true 32-bit application. It was released on November 3, 1994 and was a commercial hit. The popularity of Photoshop grew steadily and in December of 1998, the software was launched as a standalone product. The first version was in a box which included a CD-ROM with the application. With the second version, Adobe introduced a feature called OnePass. This was done as a way to use three (3) different computers to access the same image at the same time. Photoshop Elements 10 was released in July of 2013. This included several new features, including a software-based RAW editor, more Adobe Clean options, and more. Basic Photo Editing The basic photo editing software will allow users to add layers to an image and manipulate the images in various ways. Users can add text, various effects, filter images, and even create simple animations. TIP: PhotoShop is a classic '80s and '90s film image manipulation program that's now big in the graphic design world, but there is also a version for your iPhone. Easy to Use Easy to use compared to Photoshop is Paintshop Pro, which is less expensive. There are several tutorials on YouTube to help new users get started. A junior doctor at Guy's Hospital in London has been struck off for failing to warn a patient that a second operation he was performing was unnecessary. The National Health Service (NHS) doctor's professional misconduct hearing in London found he had carried out unnecessary surgery on a patient because he was distracted by unprofessional behaviour from another doctor and a hospital nurse. Professor Peter Jay, the President of the Royal College of Physicians (RCP), has expressed disappointment at the decision which follows an apology from the doctor and the apology of the hospital. Today he said: "The college's sympathies lie with the patient who has been admitted to hospital and had an operation performed on her in these circumstances, but it is clear that the doctor has failed to live up to the standards set by the College, has betrayed the trust placed in him and has acted unprofessionally. "As a result, it is not acceptable that the doctor remains on the medical register." The college said the doctor is the only person to have been struck off for misconduct over failure to complete an operation.

1. Field of the Invention The present invention relates to a method for inputting an instruction to a hand-held processing apparatus, and more particularly to a method capable of preventing a processing apparatus from executing an instruction if the apparatus is set to execute the instruction prior to inputting the instruction.

2. Description of the Prior Art In a hand-held processing apparatus such as a hand-held measurement apparatus, there is a device for measuring the distance to a target using a light beam by receiving light reflected by the target or light emitted from the target and measuring its period. A hand-held processing apparatus based on the principle of an electronic stylus has been proposed, in which the stylus, that is, an object to be measured, is reduced to a probe position close to the surface of a hand-held processing apparatus (referred to as a hand-held processing device hereinafter), and the distance to a target object is measured based on the principle that the position of the stylus is changed when the stylus is brought into contact with the surface of the hand-held processing device. The accuracy of the distance measurement is dependent on the moving velocity of the stylus on the hand-held processing device. Therefore, when the stylus is moved on the hand-held processing device with an excessive velocity, measurement errors occur so that the distance to the target is overestimated. In order to avoid
