"Jasmine" Marsh is a fictional character on the U.S. soap opera One Life to Live. She
first appeared in December 1995 and was a regular cast member until her
departure in June 2006. Casting Jasmine Marsh was created for the role of Jasmine
and the show's focus on a strong Asian American character. Her story arc was
"pretty telling for the changing demographics of Llanview, Pennsylvania". Series
Executive Producer Bradley P. Bell said, "It was important for us to try to make the
role as multidimensional as possible. We try to add ethnicity and religion into the
mix as well. Jasmine was created as a character who could represent the struggles
of Asian Americans." She was portrayed by Holly Marie Combs. Storylines Jasmine

The aim of this study was to perform an integrative review of the literature and examine the various types of bariatric surgery outcomes to determine if bariatric surgery is effective in producing weight loss and improvement in comorbidities. The primary sources used were PubMed and CINAHL, with a secondary search for additional articles in the forms of hand searching and cross-referencing. A total of 34 studies met the criteria for analysis and were included in this review. These studies were classified into three categories: (1) randomized controlled trials, (2) clinical trials, and (3) before and after studies. In controlled studies, bariatric surgery showed at least 40% of patients lost at least 25% of their body weight within 5 years and up to 100% of patients lost at least 10% of their body weight. Some patients lost more weight in the surgical group than in the controls. Some studies reported a greater decrease in waist circumference and blood pressure in the surgical group. These studies reported either direct or indirect blood glucose control benefits. The high number of complications was expected in the surgical group, which was reported to be less than that of the clinical group. The before and after studies suggested that bariatric surgery can be used as a treatment of choice for patients who cannot or will not adhere to a traditional clinical weight loss treatment plan. The studies included in this review determined that surgical procedures could provide 50 to 100% of patients with weight loss within 5 years and improve the comorbidities of obesity. However, these benefits must be weighed against the higher number of serious complications that can be found in bariatric surgery patients.Q: Can a lich born before the Sundering still be killed in the modern world?
