Developement Through The Lifespan PDF Free Ebook â€” Download PDF Urdu New Edition Complete Guide on Islam. Q: How to properly nest a php loop to get each result of a mysql query? I want to display a display a list of albums and if you click on it, it shows info about that album. However I'm having trouble displaying the data. Right now I can display all the albums, but only the first one actually displays the info. Am I nesting the loops wrong? \$sql = "SELECT * FROM albums ORDER BY album_id ASC"; \$result = mysql_query(\$sql); if (mysql_num_rows(\$result) > 0) { \$i = 0; echo " "; while (\$row = mysql_fetch_assoc(\$result)) { \$album_id = \$row["album_id"]; \$album_name = \$row["album_name"]; \$sql1 = "SELECT * FROM albums where album_id=\$album_id"; \$result1 = mysql_query(\$sql1); if (mysql_num_rows(\$result1) > 0) { echo " "; \$info = mysql_fetch_array(\$result1); c6a93da74d
