Each aircraft has a model, an ID (1 to 500), a manufacturer, a market, a country, an owner (who owns it) a location, an availability (status), a.csv file and a.xml file. How can I export this table to the same database, but on the external device? It would be like and you can export your database to a.zip file. Thank you. A: This is what I did for now in Laravel 5.1 : I exported my database to my database.sql file I added this code to my ResourceController.php : // If the file does not exists, we create a new database. if (!File::exists(Base64::decode(S3Key::base64UrlToString(\$key)))) { try { DB::statement('CREATE DATABASE `mahmoud-lmdb`'); } catch(Exception \$e) { echo \$e; } } // I load all my Aircraft. foreach (\$database as \$sql){ foreach(\$sql['data'] as \$data){ // load Aircraft type \$type = AircraftType::findOrFail(\$data['type_id']->first()); // load Aircraft specific data \$hpa = AircraftSpecific::where('aircraft_id', '=', \$data['aircraft_id']->first()); c6a93da74d
