
Descargar Simulink Portable

MATLAB r2009a works most of the time on the new version of Windows 10. But you can try if it works... Actually In fact, you can write a program for Matlab in any text editor, including Notepad! I checked it. But, of course, you need to know how to do it! Therefore, I will not talk about it in detail now. But I'll just say that in a text editor you need to specify the name of the file (in which your code will be located), type the code itself in it and save the file. Then, if you wish, you can open it in MATLAB and see how it works.
