Our team of editors got to play with Muse last year. As they did, we realized that we'd been missing out on the features that let you create and edit 3D models. Well, we've gotten online 3D and are looking forward to getting Muse into our own hands. The online 3D editor works the same way as in the app itself. With your smartphone, you can access themes, add 3D models from art sites such as Pinterest and Quara, or import, model 3D images directly from creative files. In the new version of Adobe Photoshop, the "activity log" can now store more than 500 layers on images that get imported or edited, which can be very helpful for keeping track of that old fashion "brush work" that goes with the ad slogan, "Photoshop = In the field." Instead of a usually hidden "file" panel, users can now directly drag images into a canvas. This makes it easier to duplicate an image and resize it (or copy an adjustment). It's also possible to duplicate an adjustment's effects without unchecking it. When done editing an image, users can tag it with metadata and share the edited image. You can also send your work to the web-enabled Photoshop mobile app. (Adobe Creative Cloud 2020 customers can use Lightroom Mobile or Photoshop Mobile as well.) You can edit on the web using a variety of handheld devices that come with camera support. This makes it easy to make a signature on a tablet or phone, for example. Photoshop CC includes the core editing features we've come to expect, such as layers, masks, swatches, adjustment and clone tools, tools for drawing and cutting, and easy layers and adjustments. However users can do much more than just move objects using Photoshop. Users can easily create 3D shapes, photographs, and drawings, to remove objects, add textures, animate and flip layers, create content-aware filters, apply blur and desaturate effects, adjust opacity, and much more. Join a class with other users to get help. Learn more about the app with a free trial at the Adobe website.
