As a desktop app, Photoshop now is all about speed and convenience to edit images on the go. With that in mind, users will now be able to access some of Photoshop's most powerful new tools without needing to resize, open or move parts of the image. Also, the new UI is responsive and will adapt to every screen type. In a feature dubbed Responsive Design, the new UI resizes to match any surface

when users switch from portrait to landscape, and to support high resolution images sized at 5,300 x 3,200. In addition to improving the speed and convenience of editing images in the new UI, Adobe has also invested in the next generation of Photoshop features. To meet increasing consumer and professional demand for photos and other creative media, Adobe is applying its professional design, engineering and research strengths to help make photos smarter. Last year, for the first time, Adobe conducted a consumer survey to measure consumer demand for photo editing in the cloud. Survey results showed that consumers want to be able to collaborate on photos and create, share and print images in the cloud. We also noticed that the common complaint with Photoshop was the inability to collaborate on a project. Cloud support is a major part of Photoshop's long-term plan, and consumers around the world are anticipating a new era of online photo editing. This spring, Adobe is shipping the most revolutionary mobile photography suite yet. With the release of Photoshop CC, users can shoot with Creative Cloud, edit in the cloud, reach out to friends and family around the world, and print and share images. The new mobile app, known as Photoshop Mix, empowers photographers to begin editing on iPhone, iPad or Android mobile devices without difficult file size restrictions. Photoshop Mix is available for free in the App Store and Google Play starting today.
