What's New in the?

jetVideo is a straightforward media player that supports multiple formats, including AVI, ASF, WMV, MP4, WMA, MP3, OGG, WAV, RM and DVD videos. It can be easily handled, even by less experienced users. The clean design quickly accommodates you The interface of the media player is slick and uncomplicated. Media files can be imported by using either the file browser or "drag and drop" method. So, you can use basic functions, such as pause and stop, navigate back and forth within the stream, adjust the volume and switch to full screen mode. Create playlists and data discs But you can also create a playlist, play CDs and DVDs, enable repeat mode, go frame by frame, change the screen size and aspect ratio, adjust the speed and configure an equalizer. jetVideo also lets you apply sound effects (e.g. crossfade), load subtitles and configure their options, as well as customize DirectShow properties. The tool can be set to stay on top of other applications or to minimize to the system tray. To end with The media player requires a moderate amount of CPU and system memory. It has a good response time and did not freeze, crash or pop up error dialogs during our tests. We have not come across any issues. jetVideo is certainly a tool to be taken into consideration as a basic media player. Its intuitive interface makes its features easy to figure out, whether you have worked with similar apps before or not. Description: Laser CAM 200 PRO is a device used for laser measuring. It consists of a laser module and a measurement system. Laser The measurement is made by means of the laser beam in an optically linear way. The power and the diameter of the laser beam can be adjusted. The measurement device consists of two optical modules and a mechanism with which the scales are introduced in the laser beam. Scales The outer scales consist of three reference squares. The inner scales are made of a wafer of tin, that is placed on top of a scale with a resolution of 4 µm. Mechanism In the mechanism, a scale with a measurement resolution of 4 µm can be used. The scales of the mechanism can be adjusted in the vertical and horizontal direction and the zero point can be set to zero. Description: Speedwatcher is a multi-purpose device used for measuring the speed of motor vehicles, cyclists, etc. The measurement of speed is possible in different modes: Manual mode Measurement in manual mode is possible via a button. The cycle time is on the display. Recording mode In recording mode the cycle time is entered via the keypad. Processing mode The timer can be stopped during the measuring. During the interruption of the cycle time, the duration of the
