Keyboard Macro Builder takes a very straightforward approach to creating macros. This means that you simply load your key sequences and the application does the rest. It even handles the more complex macros for you automatically. With the right application, you can type in your key sequences and have them repeated for as long as you like. This is all that is needed to make macros useful for the keyboard shortcuts and functionalities that you wish to have available to you on your system. All macros should be saved in *.cfg files and stored on the computer. This way, they are easily available and you can make changes without restarting the application. Since macros are designed for a specific keyboard layout, this program displays each macro as a number in the main window. You can see which key sequence is assigned to that number and edit the menu if needed. It is, of course, the user's responsibility to know what the numbers and letters mean. Keyboard Macro Builder can be used to create the following: Keyboard shortcuts, i.e. to run the same command as a key sequence: F11, F5, F9. Custom shortcuts, i.e. to run a special sequence of key strokes that you already know. Pressing combinations of keys to perform more than one action: Ctrl+A for turning on the screen saver, Ctrl+Z for undoing the last step in 2edc1e01e8
