

number of emails from the same category and you have many options on how to define the categories you want to extract, including the ability to select the entire category, select only the posts with email addresses or select only the posts with just one email address. The emails are then given to your email account. You can also set up your CLB and configure how to act with the emails (notify, delete or mark as spam). The great advantage of this program is that it lets you harvest emails with a good configuration. And since the harvesting will be done by the program, you can save your time and energy. It also has a detailed reporting feature, where you can see exactly how many emails were harvested and on which account they were harvested. To harvest the emails, CLB Email Fetcher, as mentioned before, has many configuration options where you can define which category you want to harvest (you can select the entire category, the posts with just one email or even the posts with just one email address). This means that you can choose any one of the categories you have configured and harvest them. ADVANTAGES Saves you time and effort. You only select the categories you need and then let the program harvest all the emails. The emails are all harvested. You 2edc1e01e8
