Cracking Adobe Photoshop is not as straightforward as installing it. But, it is possible. First, you'll need to download a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

There are other changes under the hood and I've covered those in more detail in the "Changes" category. If you prefer looking at the specifics of every change, I'd recommend reading the online change log. I've also covered some of my user experience here, as they won't be covered in the online help. There are a lot of user experience updates as well as new features of importance to amateur photographers and those looking to do more in-depth editing. The changes are mostly under the hood, so I'd recommend checking out the online change log if you want to see the details. I'll just briefly mention some of the more important one. Exposure, White Balance, Contrast, Shadows, and Highlights all have their respective Workspace sliders that can be found in the editing panel. There is also a Gamma setting that can be found under the main menu's File and then the Open menu. The levels are untested on my system, so I'll only mention it briefly. "Adobe now generally recommends double RAM for Lightroom 5," I think it should be mentioned that Lightroom is a product that uses RAM for temporary files as well. This is very much the case, especially when importing large files into Lightroom. Lightroom also uses RAM to create temporary files. The beta of patch 1.0.1 also improves the Organizer's Import dialog. It makes it easier to import files by size instead of by number of images. This is a welcome change. The negative part is that it's not live. To fix this, you have to leave the Organizer and open the Import dialog directly. You'll need to read the online change log to see if this has been addressed.
